File Explorer

Playlist Tracks
(currently empty)

Playlist Editing Controls
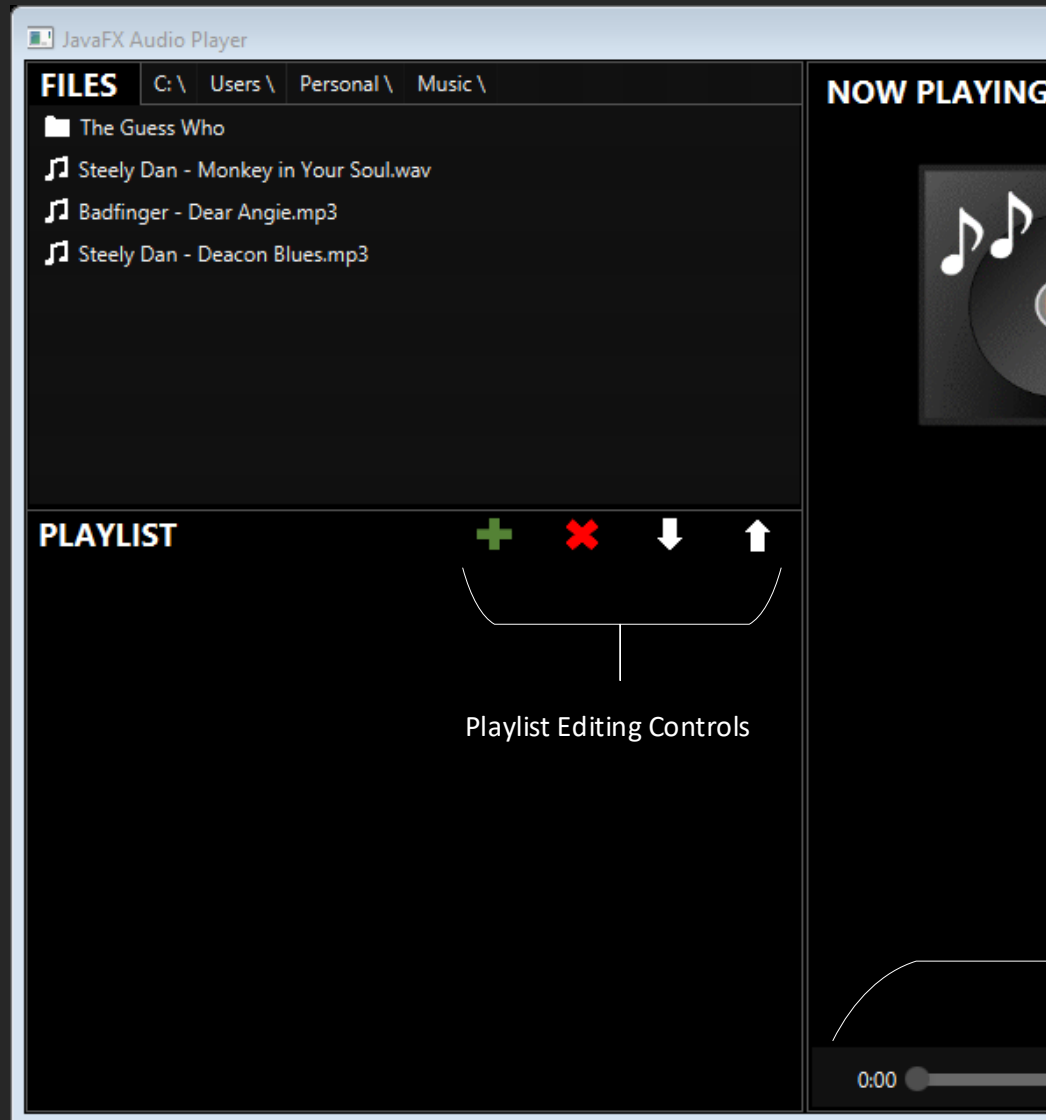

Using the system

1. Browsing for Files

Current File Explorer Path

Subfolder(s) of
Current Path

Supported Audio Files at
Current Path
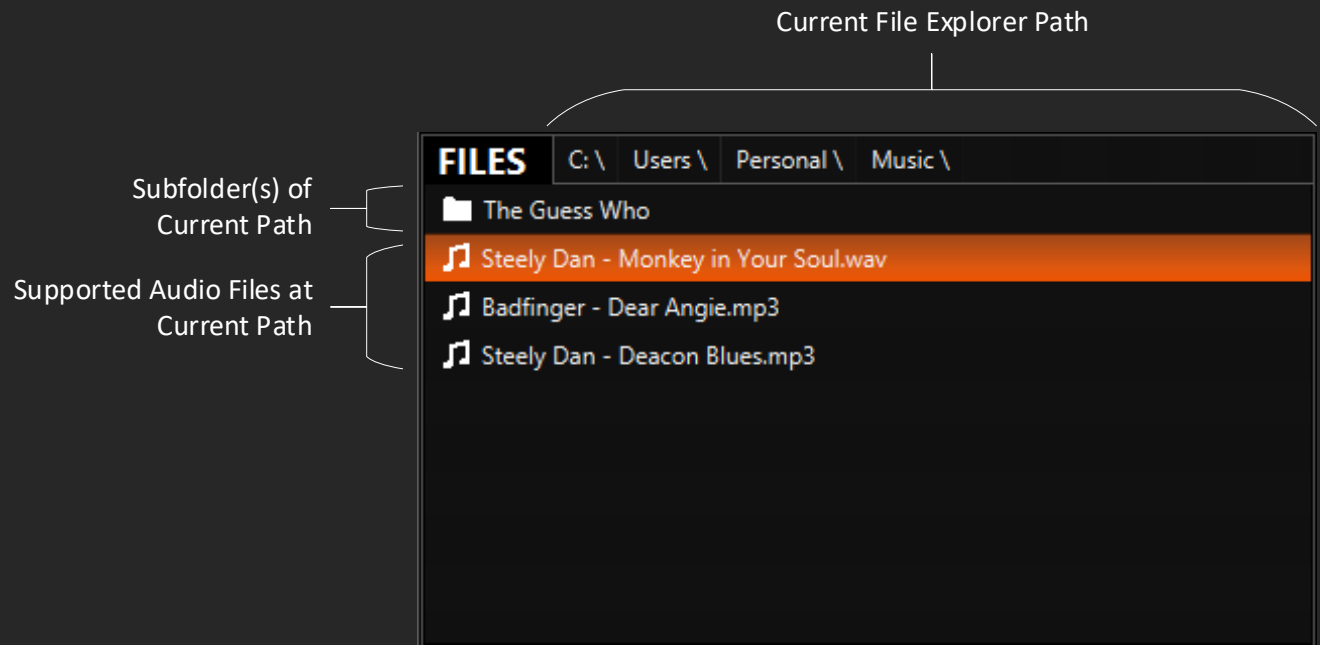

Current File Explorer Path   -   This is the directory that the
file explorer is showing the contents of. Parent directories in the path (e.g. 'Personal\' in the
image above) can be double-clicked to have the file explorer go up to that directory.

Subfolder(s) of Current Path   -   These are the child
directories of the current file explorer directory. Child directories can be double clicked to have
the file explorer go into that directory.

Supported Audio Files at Current Path   -   These are the MP3 and WAV
files that are in the current file explorer directory. Click different files while holding the
CONTROL key to make multiple selections. These selections can be added to the playlist
– see next section.

2. Building a Playlist

PLAYLIST

Steely Dan - Monkey in Your Soul.wav
Badfinger - Dear Angie.mp3
Steely Dan - Deacon Blues.mp3

Add Tracks to Playlist

Remove Tracks from Playlist

Move Track Down in List

Move Track Up in List

Add Tracks to Playlist - When this button is pressed, 1 or more selected files in the file explorer will be added to the end of the playlist. Files can also be added to the playlist by pressing ENTER while the file explorer is focused with selection, or by dragging 1 or more files from the file explorer and dropping in the playlist. Attempts to add directories or files that are already in the playlist are ignored.

Remove Tracks from Playlist - When this button is pressed, 1 or more selected files in the playlist are removed from the playlist. Files can be deleted while they are playing and they will continue to play until a new track is loaded.

Move Track Down in List - When this button is pressed, a selected track is moved down one position in the playlist by swapping positions with the
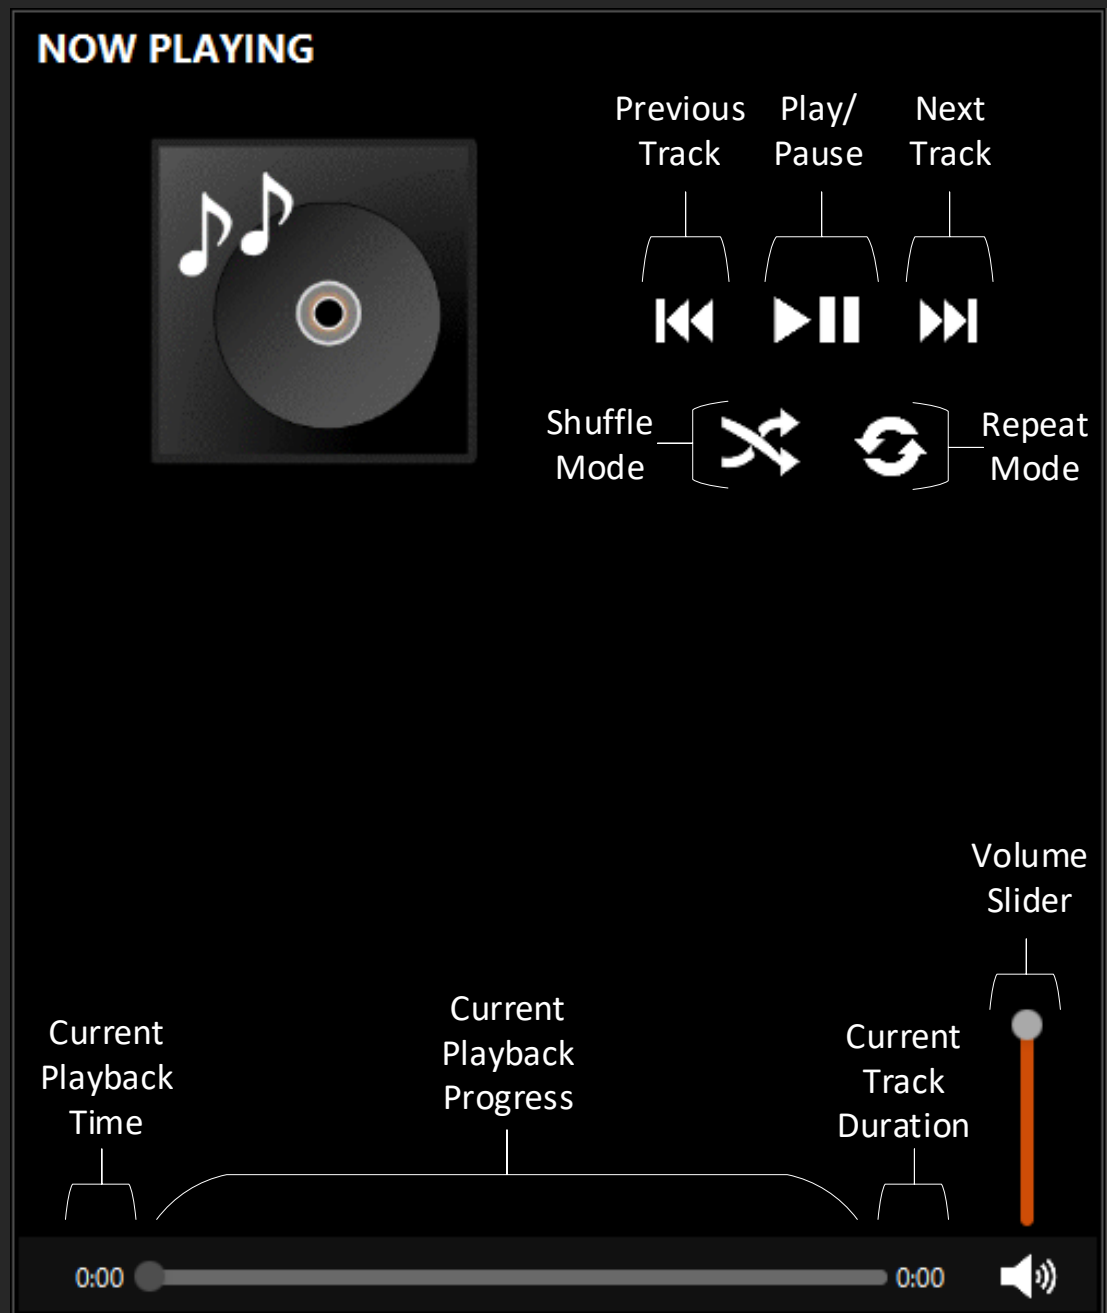

element below it. If multiple selections are made, only the most recently selected item is moved.

Move Track Up in List   -   When this button is pressed, a selected track is moved up one position in the playlist by swapping positions with the element above it. If multiple selections are made, only the most recently selected item is moved.

Current Playback Time

Current Playback Progress

Current Track Duration

0:00   0:00

Play/Pause   -   This button toggles playback between paused and playing. Pause can also be toggled on/off by pressing the SPACE bar key.

Next Track   -   This button starts the playback of a new track from the playlist, according to the playlist mode. In normal mode, the new track is the next in sequence with the previous. The next track can also be started by pressing the END key.

Previous Track   -   This button starts the playback of a track that was previously played from the playlist, if it has not been deleted from the playlist. A previous track can also be started by pressing the BACKSPACE key.

Shuffle Mode   -   This button sets the playlist mode to shuffle. When the playlist is in shuffle mode, skipping to the next track starts a random track from the playlist. When shuffle mode is ON, this button will have an orange border.

Repeat Mode   -   This button sets the playlist mode to repeat. When the playlist is in repeat mode, skipping to the next track restarts the current track (if it is still in the playlist). When shuffle mode is OFF, this button will have an orange border.

Current Playback Time   -   This label indicates the current time of playback in correspondence with the Current Playback Progress slider.

Current Playback Progress   -   This slider displays and controls the current time of playback, beginning on the left and ending on the right. Click and drag the slider thumb to start playback from a new time. Alternatively, the LEFT and RIGHT keys can be used to adjust the current playback time backwards and forwards, respectively.

Current Track Duration   -   This label shows the total duration of the currently-playing track. This duration corresponds to the full right position of the progress slider.
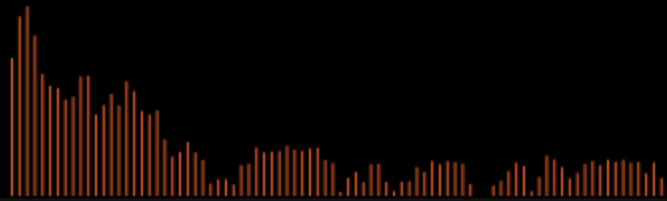

Volume Slider   -   This slider adjusts and displays the playback volume, with 100% system volume at the top of the slider and mute at the bottom. Click and drag the slider thumb to set a new volume. Alternatively, the F1 and F2 keys can be used to turn the volume down and up respectively.
